

Above: XS sights offer a clean installation on most handguns.

Center: XS or Express sights main virtue is speed. The big front ball over the line rear is a great profile for quick shooting at moderate range. Right XS sights offer an excellent sight picture for night firing.

Right: This is the personal handgun of a 23-year peace officer. It led him through three critical incidents. The sights are small and satin nickel to boot. There are better choices. Far right: A shiny GI sight is practically the worse combination for handgun sights, as our raters discovered.

Above: Wilson Combat sights offer a good design and excellent installation of the tritium inserts. Wilson Combat night eyes are a good choice for any handgun. These are mounted on a Glock pistol.

Left: If you go custom, you have the choice of using a Heinnie rear sight and Novak front sight! Center: The Heinnie is now available on several factory handguns from Taurus International. The Heinnie sight system as used on factory Taurus handguns proved effective and accurate. Right: The three-dot night-sight configuration found on this factory Taurus with Heinnie type sights is ideal for most uses—it offers good visibility and doesn't snag.
